1 SYNOPSIS

1.1 Title of the Project.

Dentricks

1.2 Introduction.

Dentricks is a user-friendly dental clinic website designed to enhance patient engagement and streamline clinic management. The platform allows users to explore available dental services, book and cancel appointments, send feedback, and view detailed information about doctors. For administrators, Dentricks provides a robust management system. The admin can add and manage doctor profiles, update and control available services, oversee patient appointments, view doctors' schedules, and monitor patient feedback. This ensures an organized and efficient workflow, improving the overall clinic experience for both patients and staff. By integrating an intuitive interface with automated database management, Dentricks simplifies dental clinic operations while ensuring a seamless experience for users.

1.3 Project category.

Website.

1.4 Tools:

UI/UX design: Figma

Backend/Frontend: Notepad++

1.5 Objectives of the project.

The primary objective of Dentricks is to develop a user-friendly and efficient dental clinic website that enhances patient engagement and simplifies clinic management. The key objectives include:

1. Enhanced Patient Experience – Provide users with an intuitive platform to explore services, book and cancel appointments, and view doctor details conveniently.
2. Efficient Appointment Management – Allow patients to schedule and cancel appointments online, reducing manual workload for clinic staff.
3. Comprehensive Admin Control – Enable the admin to add, update, and manage doctor profiles and services seamlessly.
4. Streamlined Scheduling – Provide the admin with a clear overview of doctors' schedules and appointments to improve operational efficiency.
5. Feedback System – Allow users to submit feedback, enabling the clinic to assess and improve service quality.
6. Automated Data Management – Ensure that all appointments, feedback, and service details are stored and managed efficiently through a dynamic database system.
7. Security and Accessibility – Implement secure login and access control for admin functionalities while ensuring a smooth and responsive experience for users.

1.6 Language to be used.

1.6.1 Frontend:

HTM,CSS,JAVASCRIPT.

1.6.2 Backend:

PHP, MYSQL.

1.7 Structure of Proposed Project.

1.7.1 Features:

- Patient Registration & Login – New users can register by providing basic details, and existing users can log in securely to access their accounts.
- Appointment Management – Patients can book, cancel, and view their appointments based on doctor availability
- Doctor Management – Users can view doctor details, including their specialization and available schedule
- Service Management – Patients can browse available dental services, while the clinic can update them.
- Feedback System – Patients can submit feedback about their experience, helping the clinic improve services.
- Schedule Viewing – Users can check doctor availability before booking an appointment.

1.8 Hardware Requirements:

- Hard disk:500GB or more.
- RAM:4GBor more.
- Processor: i3 or above

1.9 Software Requirements.

- Operating system: Any.
- Web server: Apache/Xampp.
- Web Browser: Any.

1.10 Module Description.

1.10.1. User Authentication Module

- Allows new users to register with their name, email, phone number, and password.
- Provides a secure login system for returning users.
- Ensures data security and prevents unauthorized access

1.10.2. Appointment Management Module

- Enables users to book, view, and cancel appointments based on doctor availability.
- Displays available time slots to prevent scheduling conflicts.
- Sends confirmation messages after booking or cancelling appointments.

1.10.3. Doctor Management Module

- Allows users to view doctor profiles, including their specialization, schedule.
- Helps patients choose the right doctor based on their needs.

1.10.4. Service Management Module

- Displays a list of dental services provided by the clinic.
- The admin can add and update services, ensuring accurate service details.
- Users can only view available services.

1.10.5. Feedback Module.

- Enables users to submit feedback about their experience.
- The admin can only view feedback, but cannot delete or modify it.

1.10.6. Schedule Viewing Module

- Allows users to check doctor availability before booking an appointment.
- Provides an organized view of doctors' working hours and off days.

1.11 Are you doing this project for any industry/Client?

Yes

1.11.1 Name and address of the client:

- Dentricks
  Chulikara, Kanhangad, Kasaragod, kerala,671531

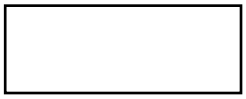

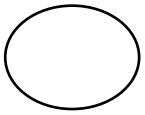

1.12 Future Scope.

- Online Payment Integration – Adding a secure payment gateway to allow patients to pay for services and confirm appointments online.
- Automated Reminders – Implementing email/SMS notifications to remind patients of upcoming appointments and follow-ups.
- Electronic Health Records (EHR) – Expanding the system to store patient medical histories, prescriptions, and treatment records for better continuity of care.
- Video Consultation Feature – Allowing patients to book and attend virtual consultations with dentists for minor concerns.
- AI-based Appointment Scheduling – Using artificial intelligence to suggest the best available appointment slots based on patient and doctor preferences.
- Multilingual Support – Making the platform available in multiple languages to serve a wider audience.
- Doctor-Patient Chat System – Enabling direct communication between doctors and patients for queries before or after appointments.
- Advanced Feedback Analysis – Using sentiment analysis to automatically analyse patient feedback and generate reports for service improvement.

2 SOFTWARE REQUIREMENT SPECIFICATION

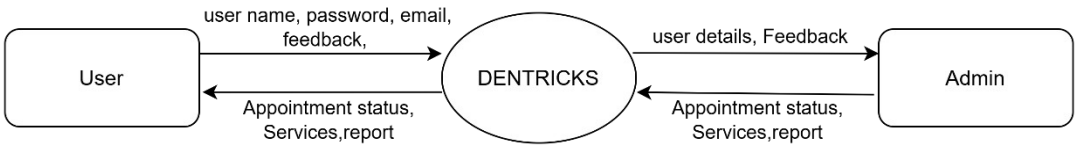

2.1 Data Flow Diagram

A Data Flow Diagram is the graphical representation of the data through an information system, modelling its process aspects. A DFD also known as bubble chart or dataflow graph are commonly used during problem analysis. DFD'S are very useful in understanding a
system and can be efficiently used during analysis. A DFD will show what kind of information will be input to and output from the system, how the data will advance through the system, and where the data will be stored it does not show information about process timing or
whether process will operate in sequence or in parallel format, a DFD is often used as the
preliminary step to create an overview of the system without going into great detail, which can later be elaborated, it can also be used for the visualization of data processing DFD shows the movement of data through different transformations or process in the system.

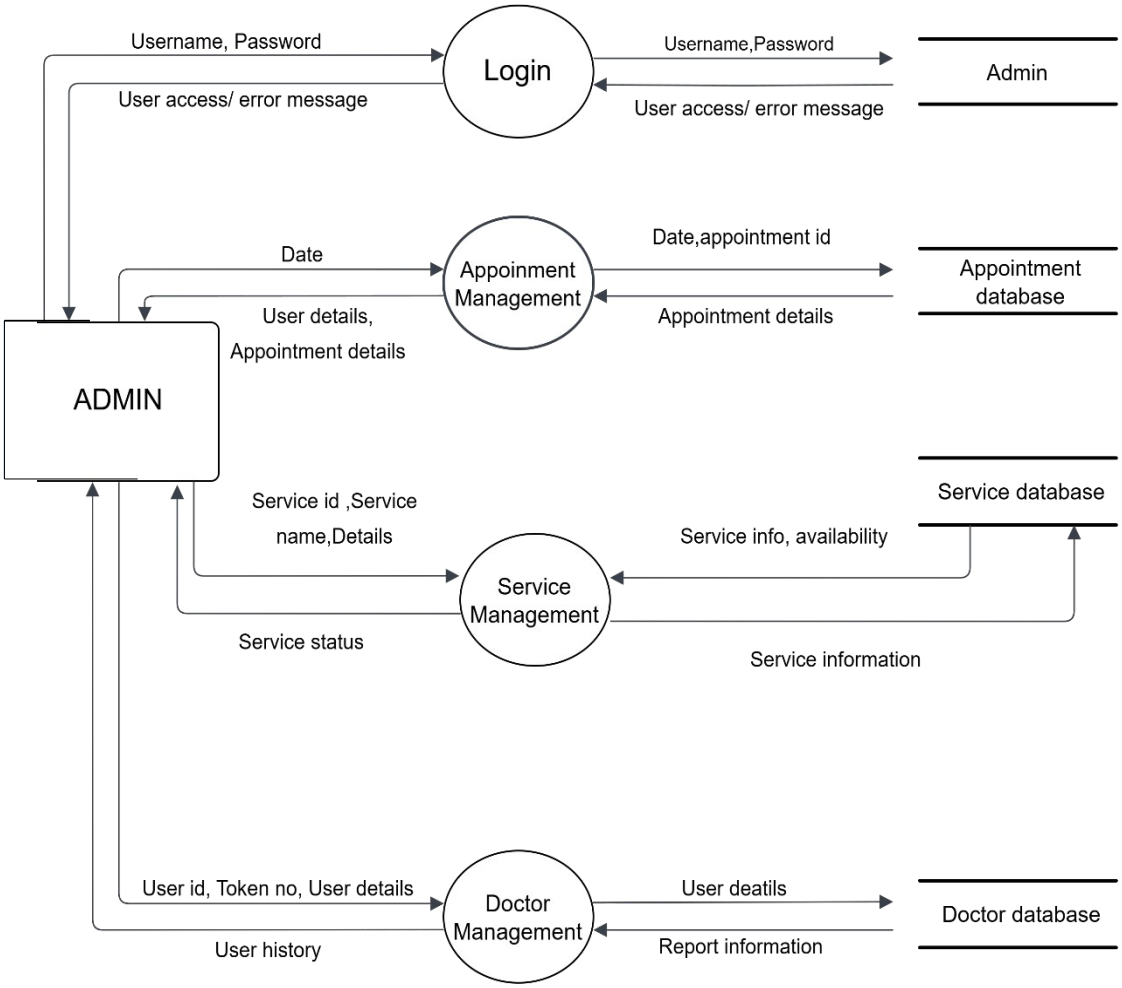

DIAGRAM	DESCRIPTION
	Represents source or destination of data.
	Represents a process that transforms incoming data into outgoing flows.
	Represents data flow.
	Represents data stores.

A Data Flow Diagram (DFD) illustrates how data is processed by a system in terms of inputs and outputs. As its name indicates its focus is on the flow of information, where it goes and how it gets stored. DFD helps structure every element of the system, keep them logically intact and interconnected.

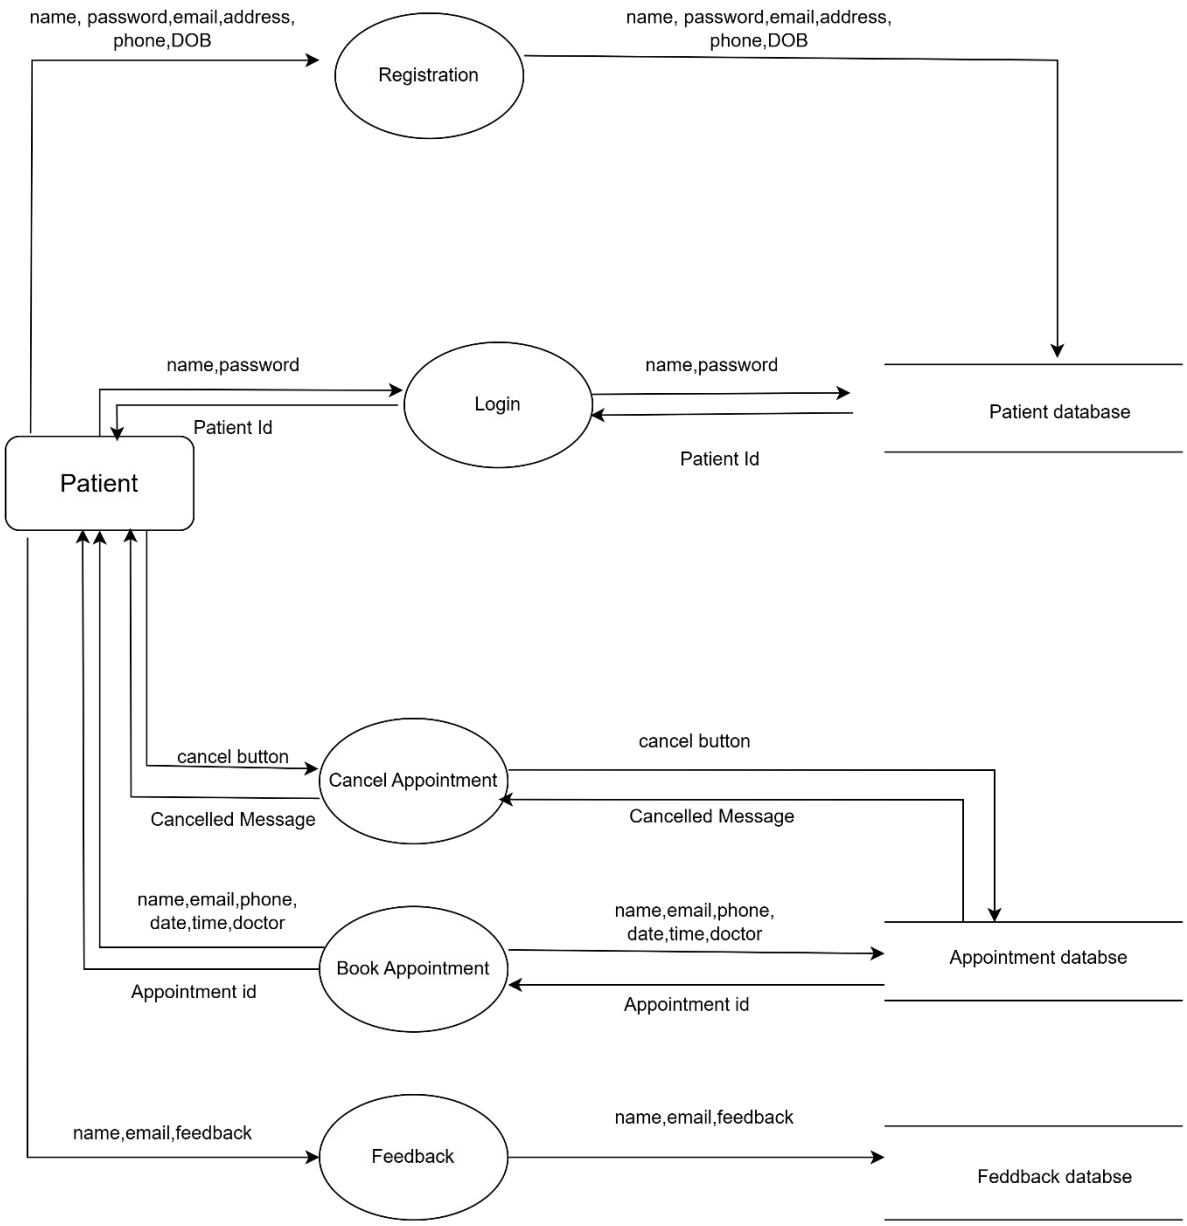

2.1.1 LEVEL 0 DFD.

2.1.2 LEVEL 1 DFD(ADMIN)

2.1.3 LEVEL 1 DFD(USER).

2.2 Introduction

Dentricks is a web-based dental clinic management system designed to simplify appointment booking, service management, and patient interactions. Patients can register, log in, book or cancel appointments, view services, check doctor availability, and submit feedback. The admin can manage doctors, services, and appointments while viewing patient feedback. By automating key tasks, Dentricks enhances efficiency, reduces manual workload, and improves patient experience, making it a valuable tool for modern dental clinics.

2.2.1 Purpose

The Software Requirement Specification (SRS) for Dentricks outlines the system's functionalities, including patient registration, appointment booking, doctor and service management, and feedback submission. It serves as a guideline for developers, ensuring clarity in requirements and minimizing errors during development. The SRS also defines system constraints, dependencies, and performance expectations, ensuring that Dentricks is a reliable, efficient, and scalable dental clinic management solution.

2.2.2 Scope Of Projects.

Dentricks is a web-based dental clinic management system that simplifies appointment booking, service viewing, doctor availability checks, and feedback submission for patients. The admin can manage doctors, services, and appointments while viewing feedback. The system enhances efficiency by automating scheduling, ensuring real-time updates, and providing a user-friendly experience. Future enhancements like online payments and mobile app integration can further improve functionality, making Dentricks a scalable and efficient solution for dental clinics.

2.2.3 Intended Audience and Reading Suggestions

Intended Audience

- Developers – To understand system functionalities and technical requirements for implementation.
- Testers – To verify that the system meets all specified requirements and performs correctly.
- Project Managers – To oversee development progress and ensure alignment with business goals.
- Stakeholders (Clinic Owners & Administrators) – To review the system's capabilities and ensure it meets the clinic's operational needs

Reading Suggestions

- Start with the Introduction to get an overview of the system and its purpose.

  Review Functional Requirements to understand core features like appointment booking

  Check Non-Functional Requirements for performance, security, and usability expectations.
- Refer to the System Models (ER diagrams, use case diagrams) for a visual understanding of system flow.
- Look at Constraints and Other Requirements to see limitations and future expansion possibilities.
- This structured approach helps different users extract relevant information efficiently. and service management.

2.2.4 Definitions, Acronyms And Abbreviations

HTML:Hyper Text Markup Language.

CSS: Cascading Style Sheet.

SRS:Software Requirement Specification .

SQL:Structured Query Language.

RAM:Random Access Memory.

CFD:Content Flow Diagram.

DFD:Data Flow Diagram

RDBMS:Relational dataBase Management System.

2.3 Overall Description.

2.3.1 Product Perspective.

Dentricks is a web-based dental clinic management system designed to enhance patient interaction and streamline clinic operations. It functions as a standalone application but can be integrated with existing clinic management systems if needed. The platform consists of a patient interface, where users can book appointments, view services, check doctor availability, and submit feedback, and an admin panel, where administrators can manage doctors, services, and appointments while viewing patient feedback.

The system is built using PHP, MySQL, HTML, CSS, and JavaScript, ensuring compatibility with both desktop and mobile devices. It requires a web server and database management system for efficient operation. With a focus on automation, security, and user-friendliness, Dentricks simplifies clinic management, reduces manual effort, and enhances patient satisfaction.

2.3.2 Product Functions.

- User Management

  Patients can register, log in, and manage their profiles securely.

  Admins have a separate login panel with management access.

- Appointment Booking System

  Patients can book, view, reschedule, or cancel appointments based on doctor availability.

  Admins can view and manage appointments to ensure smooth scheduling.

- Doctor Management

  Patients can view doctor profiles (name, specialization, and availability). Admins can add, update, or remove doctors as needed

- Service Management

  Patients can view a list of available dental services.

  Admins can add and update services based on clinic offerings.

- Feedback System

  Patients can submit feedback about their experience.

  Admins can only view feedback but cannot edit or delete it.

- Schedule Viewing

  Patients can check doctor availability before booking an appointment.

- Security & Authentication

  Secure user login with encrypted passwords. Role-based access control ensures admin and patient functionalities are separate.

2.3.3 User Classes And Characteristics.

Patients:

- General users with basic computer or mobile device knowledge.
- Can register, log in, book/cancel appointments, view services, checks doctor availability, and submit feedback.
- Require a simple and user-friendly interface for easy navigation.

Administrators (Admin):

- Clinic staff responsible for managing doctors, services, and appointments.
- Can add/update services, manage doctors, and view patient feedback.

2.4 Operating Environment.

2.4.1. General Constraints

- Requires an internet connection to function.
- Must work on desktops, laptops, tablets, and smartphones.
- Server should handle user data, appointments, and feedback efficiently.
- Only registered users can access the system.
- Patients can book appointments and submit feedback, while the admin manages doctors, services, and appointments.

2.4.2. Design Constraints

- Built using PHP, MySQL, HTML, CSS, and JavaScript, so it runs in a web browser.
- Uses MySQL database for storing and retrieving data.
- Simple and user-friendly interface for easy navigation.
- Secure login and data encryption for user safety.

2.5 Specific Requirements

2.5.1 External Interface Requirements

User Interface (UI)

- Simple and intuitive design for easy navigation.
- Responsive layout to support desktops, laptops, tablets, and mobile devices.
- Navigation bar with options for Appointments, Services, Doctors, and Feedback.

  Login/Registration pages for user authentication.
- Dashboard for Admin to manage doctors, services, and appointments.

. Hardware Interface

- Client Devices: Desktops, laptops, tablets, and smartphones.
- Server Requirements: Minimum 4GB RAM, 100GB storage, and a modern processor.
- Web server (Apache) to host the system.
- Database Server: MySQL for storing patient, appointment, and feedback data.

Software Interface

- Operating System: Windows, macOS, Linux (for both client and server).
- Web Technologies Used:
  Backend: PHP
  Frontend: HTML, CSS, JavaScript
  Database: MySQL
- Browser Compatibility: Chrome, Firefox, Edge, and Safari (latest versions).

Communication Interface

- Internet Connection Required to access the system.
- HTTP/HTTPS Protocols for secure data transmission.
- Email or SMS Notifications (Future Scope) for appointment confirmations and reminders.
- These interfaces ensure Dentricks is accessible, efficient, and secure for both patients and administrators.

2.6 Functional Requirements

User Authentication

- Patients can register by providing name, email, phone number, and password.
- Users can log in securely using their credentials.
- Admin has a separate login for managing the system.

Appointment Management

- Patients can book appointments based on doctor availability.
- Patients can view or cancel appointments if needed.
- The system ensures no scheduling conflicts.

Doctor Management

- Patients can view doctor profiles, including name, specialization, and availability.
- Admin can add, update, or remove doctors as needed.

Service Management

- Patients can view available dental services.
- Admin can add and update services when necessary.

Feedback System

- Patients can submit feedback about their experience.
- Admin can only view feedback but cannot delete or modify it.

Schedule Viewing

- Patients can check doctor availability before booking appointments.

Admin Panel

- Admin can manage doctors, services, and appointments efficiently.

2.7 Performance Requirements

- Fast Response Time: Actions like booking appointments and viewing services should take less than 3 seconds.
- Scalability: The system should handle up to 500 users at a time without slowing down.
- High Availability: The system should be available 99.9% of the time to ensure smooth access.
- Efficient Data Storage: The database should store up to 50GB of patient, appointment, and service data.
- Secure Data Handling: User information should be encrypted for security.
- Error Handling: The system should show clear error messages and guide users in case of issues

2.8 Other Requirement

2.8.1 Security Requirements

- User passwords should be encrypted to protect personal data.
- The system should use SSL/HTTPS for secure communication.
- Only authorized users (admin and registered patients) can access specific features.

2.8.2 Usability Requirements

- The interface should be simple and user-friendly for patients and administrators.
- The system should work on desktops, laptops, tablets, and smartphones. Navigation should be easy, with clear labels and buttons.

2.8.3 Maintenance Requirements

- The system should allow future updates and feature additions without major changes.
- Regular bug fixes and security patches should be applied.

2.9 System features.

- User Registration & Login – Patients can create an account and log in securely.
- Appointment Management – Users can book, cancel, and view their appointment details.
- Doctor Management – Patients can view doctor profiles, including specialization and availability.
- Service Management – Patients can browse dental services, while the admin can add and update services.
- Feedback System – Patients can submit feedback, and the admin can view it for service improvement.

- Schedule Viewing – Users can check doctor availability before booking an appointment.
- Admin Panel – The admin can manage doctors, services, and appointments efficiently.
- User-Friendly Interface – The system provides a simple and interactive design for easy navigation.
- Secure Data Management – Ensures patient and clinic data is securely stored and accessed.

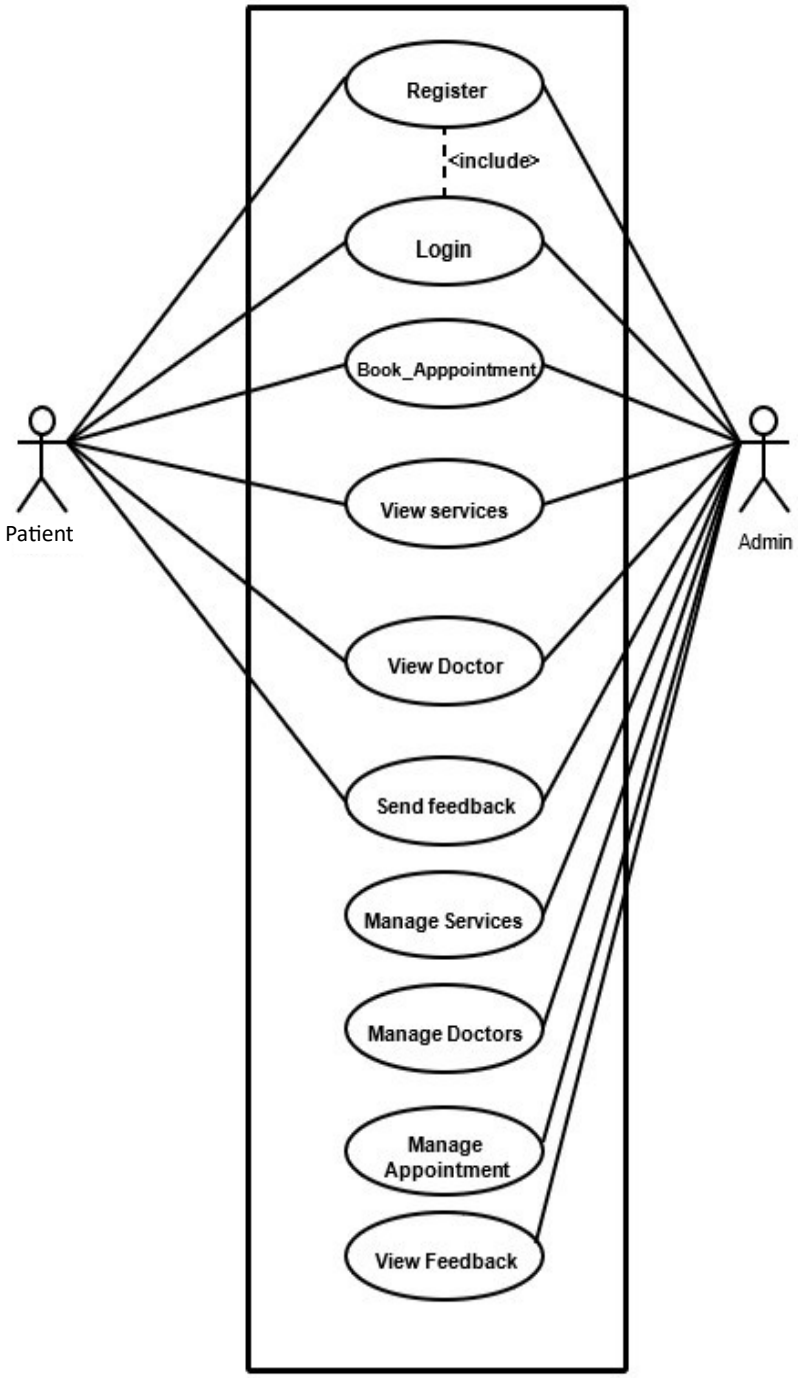

3 SYSTEM MODELLING

3.1 Use Case Diagram

A use case diagram is a graphic depiction of the interactions among the elements of a system. It is a methodology used in system analysis to identify, clarify and organize system requirements. A use case diagram does not show the detail of the use case, it only summarizes some of the relationships between use case and the actors. In particular, the diagram does not show the order in which steps are performed to achieve the goals of each use case. It deals only with the functional requirement of the system. Use case diagrams are usually referred to as behavior diagrams, which is used to describe set of actions that systems should or can perform in collaboration with one or more external users of the system ie Actors. Each use case should provide one or more observable and valuable result to the actor

The purpose of use case diagram is to capture core functionalities of a system and visualize the interactions of various things called as actors with the use case. A use case consists of use cases, persons, or various things that are invoking the features called as actors and the elements that are responsible for implementing the use cases. Use case diagrams capture the dynamic behavior of live system. Use case diagrams are responsible for visualizing the external things that interact with part of the system.

4. DATABASE MODELLING

4.1 Entity Relationship Diagram(ERD).

An Entity relationship diagram(ERD) is a data modelling technique that graphically illustrates information system's entities and the relationship between those entities. An ERD is a conceptual and representational model of data used to represent the entity frame work infrastructure

Diagram	Description
	Entity: An Entity can be person, place, event or object is relevant to a given System.
	Relationship: A relationship describes how entities interact
	Attributes: An attribute is a property, or characteristics of an entity, relationship or another attributes
	Links: This Symbol links attribute to entity or entity to relationship.

4.2 Table Description

Table name: admins

Table description: This table is used to store the details of the Admin.

Column name	Type	Size	Constraints	Description
id	int	10	Primary key	Unique id given to the admin
Name	varchar	50	Not null	Username of the admin
Password	varchar	255	Not null	Password of the Admin

Table name: doctors

Table description: This table is used to store the details of doctors.

Column name	Type	Size	Constraints	Description
id	int	11	Foreign key	Unique id given to the user
name	varchar	50	Not null	Name of the doctor
specialization	varchar	100	Not null	Education of the doctor.
phone	varchar	20	Not null	Phone number of the doctor
email	varchar	100	Not null	Email address of the doctor
bio	text		Null	Details of the doctor

Table name: patients

Table description: This table is used to store the details of the patients.

Column name	**Type**	**Size**	**Constraints**	**Description**
id	int	11	Primary key	Unique id given to the patient.
full_name	varchar	100	Not null	Username of the patient.
Password	varchar	255	Not null	Password of the patient
phone	varchar	15	Not null	Phone number of the patient
email	varchar	100	Not null	Email address of the patients
address	address	255	Not null	Address of the pateint
gender	enum	(“male”,”female”,”other”)	Not null	Gender of the pateint
date_pf_birth	date		Not null	Date of birth of the patient.
registration_date	timestamp		Not null	Date of registration

Table name: appointments.

Table description: This table is used to store the details of Appointment booking.

Column name	Type	Size	Constraints	Description
id	int	11	Primary key	Unique id given to the patient to book appointment
patient_na me	varchar	100	Not null	Name of patient
email	varchar	100	Not null	Email address of the patient
appointmen t-time	varchar	20	Not null	Preferred time for the patient to consult
doctor	varchar	50	Not null	Name of the doctor
phone	varrchar	12	Not null	Phone number of the patient
appomitmen t_date	date	20	Not null	Preferred date for the patient to consult
status	enum	(“pending” ,” confirme d”,complet ed”,”cancel ed”)	Not null	Status of Appointment

Table name: services

Table description: This table is used to store the details of services

Column name	Type	Size	Constraints	Description
id	int	11	Primary key	Unique id of the service
services_name	varchar	255	Not null	Name of the service
description	text		Not null	Details of the service
photo	varchar	255	Not null	Related photo of the service

Table name: feedback

Table description: This table is used to store the details of feedback.

Column name	**Type**	**Size**	**Constraints**	**Description**
id	int	11	Primary key	Unique id given to the patient to send feedback
name	varchar	255	Not null	Name of patient
email	varchar	255	Not null	Email address of the patient
feedback	text		Not null	The feedback sent by the patient

6.2 Annexures

Annexure - I: Project Screenshots

This section contains screenshots of the key interfaces of the Dentricks system:

1. Login Page

2. Registration Page

3. Admin Dashboard

4. Appointment Management Interface

5. Doctor Profile Page

6. Feedback Submission Page

7. Service Viewing Page

Annexure - II: Sample Code Snippets

This section includes important PHP and database scripts used in the project:

1. PHP Code for Login & Registration

2. Database Connection Code

3. Appointment Booking System Code 4. Service Management Code

Annexure - III: Test Cases and Results

The test cases ensure the correct functionality of the system:

1. Registration Test Cases

2. Appointment Booking Test Cases

3. Admin Login & Management Test Cases

4. Feedback Submission Test Cases

Annexure - IV: Database Schema

This section contains the database design and relationships:

1. ER Diagram

2. Tables and Relationships

Annexure - V: User Manual

Instructions for using the system:

1. How to register as a patient

2. How to book an appointment

3. How to manage services (Admin)

4. How to view feedback (Admin)

Annexure - VI: Future Enhancements

Potential upgrades for the system:

1. Online Payment System

2. AI-based Appointment Scheduling

3. Doctor-Patient Chat System
